Profile

I am a recently certified Full Stack Web Developer with a fearsome passion for learning. I love the struggle of solving problems and making a product work as envisioned. I have an intractable belief in continuous development that has helped me streamline production in many jobs I have held. I have full intention in continuing my education and mastering as many fields of development as possible.

Relevant Skills

- Soft Skills: A passion for continuous improvement, a dedicated focus to a problem solving attitude, the ability to conceive of big picture relationships between functional parts while also maintaining a concise and critical view of details. I am also adamant about the importance of honesty, communication, and accountability. I will be the first to admit I need help or that I made a mistake because that is the best path to fixing the problem. I communicate my needs and intentions clearly and avoid committing to something I am unsure of without at least making the effective variables clear.

- Technical Skills: I have certified in IT Support through IBM on Coursera, Javascript, ReactJS, Python 3 (including Flask), HTML5, CSS, JSON, Git, SQL, SCSS, Flexbox, CSS Grid and UX Design through Bottega Coding University. I am currently early in the process of learning CyberSecurity, Python for Automation, and UX/UI design from Grow with Google.

Projects

- **Professional Site:** A full response React application that utilizes various aspects of Modern React to showcase my Portfolio and my professional Blog. Modern React concepts include Hook based state management (useState, useContext), React Router 6, function component with prop passing and Javascript/scss interchanges to dynamically place divs. Also, a more advanced usage of CSS Grid was utilized in this project as opposed to previous projects. This will eventually be the public facing aspect of my React HomePage project.
- **Coble X Diner**: A fully responsive React Application that showcases a completely original restaurant/ internet cafe idea developed from my personal dream of coding from inside my own internet cafe. Includes a context sensitive chatbot "Waiter". Utilizes React, SCSS, JS, State Management through Redux Toolkit, HTML5, and responsible dependency usage.
- **React Home Page**: A personal productivity project in the production phase. A simple to use homepage that will be locally hosted and will have all the new content I like to see every day in one location. This project has been wireframed and will utilize a dual backend as well as dual frontend for both the PII containing personal workflow aspect as well as a public backend for populating the professional site. The use case is to combine personal growth and organization activities with curating a professional persona. When certain relevant items are inputted and flagged on the workflow/todo private app, upon completion the data will be auto populated to the professional site, giving an appearance of integrity and honesty to the site due to its currency. Features to be included will be screen reading and journaling functionality as well as a productivity tracker that acknowledges what I actually journal and what I just browse. Numerical metrics may also be included as well as various wellbeing trackers such as mood journal or exercise journaling.

Work Experience

- **Bottega University**, *Apprentice Teaching Assistant*   03/23-Now

Teaching Full Stack Development to Full time and Part time students in a Zoom environment. Includes adding information for updated content, arranging collaborative projects, and helping students navigate the psychosocial aspects of entering a new field with a new paradigm.

- **Rural and Remote**, *Volunteer Mentor*   01/23-Now

Guiding students through Coding curriculum as well as advising in career skills such as self-advocacy, interviewing, organization and self care in a remote work setting.

- **Self Directed**, *Volunteer Tutor*   01/23-Now

Assisting various adults get through several levels of education including full high school curriculums, GED programs and college courses. Current clients are pursuing a High school Diploma, and another is pursuing College Algebra.

- **1Vision Aviation**, *Parts Room Clerk*   09/22-01/23

Utilizing a web hosted inventory and order system to maintain an accurate view of stock. Frequent spreadsheet development and data entry. Attention to detail and computer knowledge crucial to maintaining a smooth operation.

- **Crestwood Cabinetry**, *CNC Operator*   09/21-09/22

Running a CNC machine to cut cabinet pieces out of fibreboard. Required many computer management skills to navigate bugs and errors. Frequent file manipulation and file alteration to maintain proper cuts. Attention to detail in the form of piece defects, sounds, smells, and sights to keep the machine operable without downtime.

Education

- **Advanced Python for Automation,** Grow with Google through Coursera, Online
  03/23 - Now

A certification to validate the ability to utilize Python to create scripts to automate repetitive tasks and optimize workload.

- **Technical Support Certification**, IBM through Coursera, Online   08/22 - 09/22

A certification adequate for an entry level Technical Support position for both software and hardware as well as a specialty in cloud based computing.

- **Full Stack Web Development**, Bottega University, Online   09/22 - 03/23

Certification for Full Stack Web Development including Python 3, HTML5, CSS, SCSS, SQL, Javascript, React.js, Node.js, Flexbox, and CSS Grid.

- **Cybersecurity**, Grow with Google through Coursera, Online   05/23 - Now

Certification for Cybersecurity training in order to develop more secure apps and receive training for an entry level job.

- **UX/UI**, Grow with Google through Coursera, Online   05/23 - Now

Certification validating training in creating meaningful and accessible user interfaces.

Hobbies

- **Application Development**
  I always have an app I am developing. I enjoy coding as more than a career and I am happiest when I always have a pet project to build on.
- **Continuous Learning**
  I like to listen to a couple lectures or tutorials a day, encompassing many subjects including App Development, History, Science, Psychology, and self improvement.
- **Video Gaming**
  I enjoy playing strategy, survival and tactics games on my free time.
